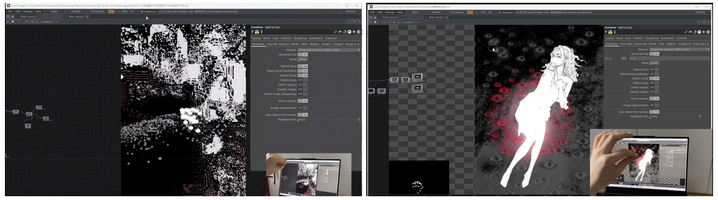
OTHER WORKS

Smart temperature-controlled down jacket

Designed the user experience, wearable interactions, and aesthetics of an MXene-integrated smart heated down jacket, delivering rapid heating, lasting warmth for up to 6 hours, and superior comfort. The product achieved RMB 4 million in sales and received the prestigious Red Dot: **Best of the Best Award** for design innovation.

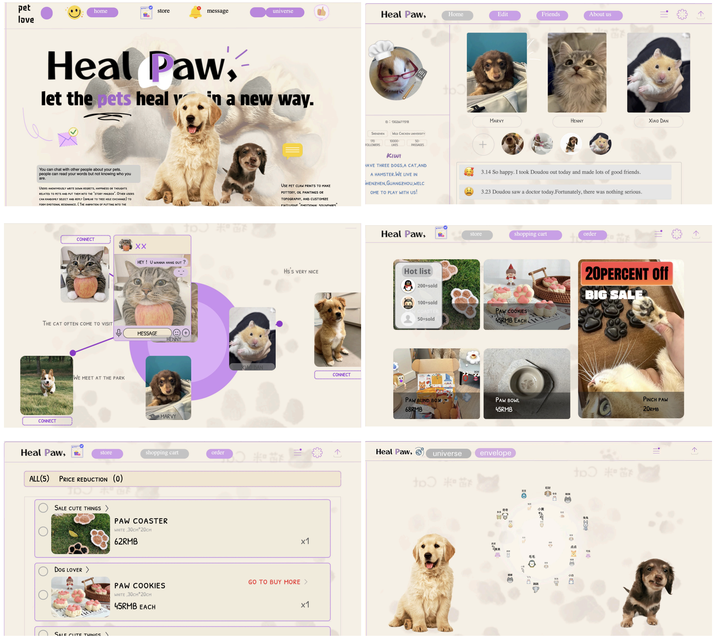
Design of Smart Temperature-Controlled Apparel for the Asian Winter Games

Various wearable power supply methods proposed in this work enable green energy generation and storage. Combined with AI technology, they support intelligent energy management and carbon accounting, integrating technology, creative design, and fashion to inspire the future of sustainable smart clothing.



Gesture Interaction: Streaming Particles, Light Following

A TouchDesigner-based gesture interaction system that transforms human movements into flowing particles and responsive light, enabling an immersive dialogue between users and digital environments.



Heal Paw：Pet Therapy Website

Create an account for your pet to document daily life, make pet friends, collect pet mail, and subscribe to pet-related content.
